

Managed IT, run by AI. Priced like it.

Klaravex is an AI-first managed IT & security company for US small business — investor overview.

CONFIDENTIAL · AUGUST 2026

89%

of IT support work no longer needs a human.

The industry still bills as if all of it does.

Small business IT is broken in three places

Priced out

Compliance-grade IT — HIPAA, SOC 2, ISO 27001 readiness — is enterprise-priced because it is delivered with enterprise headcount.

Misaligned

Per-ticket billing rewards a full queue. Vendor commissions shape recommendations. The people grading the environment are the ones running it.

Low trust

Consumers get truck-roll prices and urgency-driven scam “help.” Nobody in the market leads with honesty.

The cost of resolution just collapsed

AI can now close the loop

Frontier models resolve real tickets end to end — triage, fix, documentation — not just deflect them to an FAQ.

Compliance pressure is rising

Cyber-insurance and client audits now reach firms with 10 seats, not 1,000.

Incumbents cannot follow

Labor-based MSPs would have to fire their own delivery model to match AI-first economics.

Two surfaces. One AI engine.

klaravex.com

B2B managed IT & security. Flat fee per user, tiers from \$75 to \$250. 2-hour senior response, zero vendor commissions.

personal.klaravex.com

Consumer help by Klaravex AI. \$29 sessions, plans from \$29/month, free scam & hack recovery.

KLARAVEX AI ENGINE

Voice · SMS · chat · email → one AI coordinator, one guardrail policy, one escalation path.
Always labeled as AI.

Every issue takes the same honest path

Every action is logged; a human-review console owns approvals, billing and exceptions.

BUSINESS MODEL

Flat, recurring, conflict-free

FOUNDATION

from \$75

managed IT core

ASSURANCE

from \$100

+ security & identity

DIRECTIVE

from \$150

compliance readiness + MDR + vCISO
— where enterprise deals start

Per user, per month. No per-ticket billing — nobody profits from a full queue. No vendor commissions — recommendations carry no hidden margin. Consumer line adds \$29 sessions, \$29/mo Solo, \$39/mo Family.

AI resolution is gross margin

89%

of volume at near-zero
marginal cost

11%

the only labor
in the loop

24/7

coverage with no
night-shift payroll

Every point of AI resolution is margin a labor-based MSP has to buy with headcount.

The company runs on its own product

Autonomous engineering

A closed reason-act-review-verify loop ships features against a versioned spec, with quality gates and audit trails.

Autonomous revenue

Growth streams — leads, outreach, content — run on independent schedulers with human-gated publishing. Cadence survives failures elsewhere.

One-screen operations

Delivery, pipeline, finances and the agent fleet on a single operator console with honest status. Today an internal edge; tomorrow a product.

Radical transparency

AI always labeled. No fake reviews. Public agent experiments. Trust compounds in a low-trust market.

A warm wedge, then compounding funnels

1

Founder-led wedge

Years of hands-on engagements — foundations, legal aid, professional services. Free written assessments open doors.

2

Compliance verticals

Small law, accounting and medical practices — where the premium tier is bought, not sold.

3

Autonomous funnel

Growth streams generate leads and content on cadence; a public AI-agent scoreboard proves the governance.

4

Consumer flywheel

Free scam recovery earns word of mouth in the exact demographic that buys the Family plan.

Numbers go here — and only real ones

[MRR · pipeline · assessments delivered · consumer sessions]

Populate from live scorecards before any external send. This deck ships with placeholders on principle: the same no-fabrication policy the product is built on.

Verifiable today: Secure Score 32% → 78% in under 60 days on a led engagement · full multi-site network replacement over one weekend.

Honest, AI-first IT services — built to scale without headcount.

Raising to scale the AI operations layer, cut growth streams to full autonomy, and productize the operator console.
