

The AI-native managed IT & security provider.

78 production AI agents resolve first-line IT. One senior engineer owns every outcome.

Small businesses get the worst of IT.

1 Enterprise threats, consumer budgets

Ransomware, compliance mandates, and cyber-insurance requirements hit 10–50-person companies that have no security posture at all.

2 Traditional MSPs price them out

Managed-services economics require human headcount, so providers chase bigger clients — small businesses become an afterthought.

3 The result: nobody owns the outcome

SMBs bounce between break-fix vendors, unanswered tickets, and DIY — until an incident forces a panic spend.

10-50

employee companies

the under-served core of the market

\$0

security budget

typical posture before their first incident

AI does first-line. A senior engineer owns the rest.

1

Resolve

78 production AI agents handle tier-1/2 support, triage, scheduling, and compliance workflows around the clock — always AI-labeled, never pretending to be human.

2

Escalate

Human-in-the-loop gates on higher-risk actions. Complex issues route to a senior engineer with full context — no re-explaining, no ticket purgatory.

3

Own

Every client gets a named senior engineer accountable for outcomes, a live portal, and documented resolutions. Accountability is the product.

“89% of IT issues resolved before you finish your coffee.”

The AI-native window is open — briefly.

1 Agents crossed the reliability threshold

In the last 18 months, frontier-model agents became dependable enough for real ticket resolution — not chatbots, actual fixes.

2 Incumbents cannot retrofit the cost structure

Traditional MSPs carry human-headcount economics. An AI-first operator sets a price floor they cannot follow.

3 Compliance demand is exploding downstream

Cyber-insurance questionnaires, HIPAA, SOC 2 — requirements now reach companies far too small for traditional providers.

~5x

cost advantage

one engineer + agents vs. a ten-person MSP delivering the same client base

A production platform, not a prototype.

78 AI agents

support resolution, lead qualification, scheduling, compliance — in production today

Client portal

magic-link auth, live ticket status, named engineer, documented resolutions

Knowledge-base RAG

semantic search grounded answers; every fix becomes searchable institutional memory

Billing & ops

50 Stripe products live; self-healing infrastructure with watchdog monitoring

Stack: Claude API · FastAPI · Celery · MCP · RAG · Azure + Hetzner

A huge market the incumbents structurally ignore.

\$300B+

global managed services

growing ~12% annually

33M

US small businesses

most with no dedicated IT

2

revenue engines

B2B recurring plans + consumer self-serve sessions

Beachhead: 10–50-seat US businesses with compliance pressure (healthcare, legal, finance) — bought per-seat, landed through a free assessment funnel, expanded through supplier-diversity procurement (NGLCC / MBE certified).

Recurring per-seat revenue, near-zero marginal cost.

B2B Managed Plans

Foundation · Assurance · Directive

per-seat monthly recurring; the core engine

Fixed-fee Projects

audits, M365/Azure, compliance readiness

high-margin entry points that convert to plans

Consumer Sessions

tech help, security, job-hunt kit

Stripe self-checkout; zero sales motion

The unit-economics engine: AI deflection resolves routine tickets at near-zero marginal cost. Each new seat adds revenue without adding headcount — the margin curve bends the opposite way from a traditional MSP.

Built and live — launching revenue now.

web properties

US + EU, B2B + consumer

\$0

raised

100% bootstrapped

Status (June 2026): pre-revenue; platform, billing, portal, and insurance (cyber + E&O) all in place; first marketing campaign launching now; NGLCC LGBTBE and MBE certifications in progress.

Everything on this slide was designed, built, and shipped by one founder.

Land with a free assessment. Expand per seat.

1

Free IT assessment

red/yellow/green risk scorecard — a concrete artifact, not a sales call

2

Convert to managed plan

findings map directly to per-seat tiers; the scorecard sells the fix

3

Expand & refer

portal visibility + quarterly reviews drive seat growth and referrals

Channels: SEO/AEO content engine (knowledge base live) · partner referrals (accountants, cyber-insurance brokers) · supplier-diversity procurement via NGLCC + MBE certification · consumer self-serve at personal.klaravex.com.

Anthony Stewart — builder and operator.

Anthony Stewart

Founder & Senior Engineer · Los Angeles

- 15+ years enterprise IT and security
- Ran an independent consultancy in Berlin serving SMBs
- Personally engineered the 78-agent platform end-to-end
- Black- and LGBTQ+-owned (100%) — NGLCC & MBE certifications in progress

Why this founder wins this market

There is no gap between “the technical founder” and “the delivery team.” The person who built the agents is the senior engineer who owns client outcomes — which is exactly the accountability promise the product makes. Bootstrapped discipline keeps costs near zero until revenue scales.

Next 12 months: prove the model in public.

1 10 B2B clients + 100 consumer sessions

recurring revenue covering all operating costs by month twelve

2 NGLCC LGBTBE + MBE certified

first two corporate supplier-diversity registrations submitted

3 Published AI-deflection economics

≥80% AI resolution rate and cost-per-ticket benchmarks vs. traditional MSPs

What we're seeking

Accelerator partnership, mentorship, and growth capital conversations — plus customers and supplier-diversity channel introductions. Capital accelerates acquisition and certifications; the platform is already paid for.
