

visitBerlin Meeting Briefcase

Date: Wednesday, August 5, 2026 | **Location:** visitBerlin offices, Berlin
Your contact: Frank Heise (Deputy Head, Digital & IT) | **Coordinator:** Jule Weidner (Advisor to Executive Board)

Contents

- Section 1 — Who They Are & What They Want
- Section 2 — Your Differentiators
- Section 3 — Live System Evidence
- Section 4 — Architecture You'd Propose
- Section 5 — Engagement Model & Pricing
- Section 6 — Questions to Ask
- Section 7 — Meeting Flow
- Section 8 — Key People Cheat Sheet

"I build production AI systems — knowledge bases, chat interfaces, voice assistants — on local infrastructure that keeps data in-house. I've already built both of the systems you're planning."

1. Who They Are & What They Want

visitBerlin = Berlin Tourismus & Kongress GmbH. Official destination organization for Berlin. Owned by city + state. ~200 staff.

CWU AI Team (10 people, peer-to-peer, no hierarchy)

Name	Department	Role
Frank Heise	Digital & IT	Deputy Dept Head — YOUR PRIMARY CONTACT
Martin Wöbke	Digital & IT	Network Admin, AI Server — YOUR TECH COUNTERPART
Katharina Möhl	Communications	Team Lead — key content stakeholder

Josefine Köhn-Haskins	Communications	Content Editor
Janine Blechschmidt	Communications	Team Lead, Graphics/Video
Marco	Communications	Photographer, Visual Content
Michaela Keder	Market Management	Health Excellence Website
Inske de Jong	Destination Development	Team Member
Kerstin Block	Business Development	Also leads CWU Future Hub — STRATEGIC
Claudia Trinks	E-Commerce	Team Lead

Jule Weidner coordinates CWU AI as Advisor to the Executive Board. She's the budget authority — not listed in the team but runs it.

Their AI Stack (3-Level Model)

Level	Tool	Who
1 — Free	Microsoft Copilot	Everyone (research, quick questions)
2 — Specialized	Department-purchased tools	Per team (image, video, etc.)
3 — Protected	ai.visitberlin.de (internal server)	Confidential data, custom bots
Pilot	Claude (Anthropic)	CWU AI + executives

Two Flagship Projects

Project 1: Knowledge Manager

Central knowledge capture — information, experiences, best practices accessible to everyone.

→ *This is a RAG/KB system. You've already built one in production.*

Project 2: Customer Journey Chatbot

AI chatbot for visitors: inspiration → booking → in-Berlin → departure. Evolution of their "Berlin Bot."

→ *This is a context-aware multi-intent chat system. You've built this too.*

2. Your Differentiators

1. You've already built both projects they want

Knowledge Manager = your production KB pipeline (88 knowledge chunks, cited answers, reindex pipeline, live at api.klaravex.com).

Customer Journey Chatbot = your Loki chat widget (per-locale detection, real-time API, quickReply buttons) + 8-assistant Vapi voice squad.

2. Local AI + Cloud Hybrid

You run qwen-72b on bare metal (RTX 3090), Ollama, LiteLLM proxy for multi-model routing — AND you orchestrate Claude for complex reasoning. Their Level 3 (ai.visitberlin.de) aligns perfectly. Most consultants know cloud OR local. You do both.

3. Deep Claude Expertise

They're testing Claude right now. You use Claude Code as your daily development environment. You've built agent orchestration (Loki Mode), multi-model routing, and production systems on Claude. You can help them get real value from their Claude pilot.

4. GDPR-by-Architecture

Your local-first approach means confidential data never leaves the building. For a public org under GDPR scrutiny, this isn't a nice-to-have — it's a requirement. You can show them exactly how to keep their Knowledge Manager data on-premises.

5. Builder, Not an Agency

You're the person who actually writes the code AND advises on strategy. No project managers, no account executives, no 5-layer communication chain. For a 10-person peer-to-peer team, this is a cultural match.

3. Live System Evidence

These are production systems you built and operate. Show these URLs from any browser during the meeting.

Public Endpoints LIVE

URL	What It Shows	Status
klaravex.com	Main site with Loki chat widget (bottom-right)	200 OK
personal.klaravex.com	Consumer portal with chat + service pages	200 OK
api.klaravex.com/healthz	API health check	200 OK

Live KB Response (captured 2026-08-04)

Your Knowledge Manager returns cited answers with source URLs — exactly what visitBerlin wants:

```
{
  "reply": "...Klaravex handles VPN setup and management as part of our managed security service tiers...",
  "citations": [
    {
      "title": "Setting Up and Troubleshooting VPN on Windows and Mac",
      "url": "https://klaravex.com/knowledge-base/vpn-setup/"
    },
    {
      "title": "Windows Updates – What to Do When Your Computer...",
      "url": "https://klaravex.com/knowledge-base/windows-update/"
    }
  ],
  "match_type": "embedding"
}
```

Key points to highlight: Cited sources (not hallucinated). Embedding-based semantic search. Real KB articles as ground truth. This is exactly the architecture their Knowledge Manager needs.

What to Demo Live (if you have WiFi)

1. Open **klaravex.com** → click chat widget → ask "How do I set up MFA?" → show cited answer
2. Open **personal.klaravex.com** → show consumer service pages with integrated chat
3. Show the Vapi phone number (if BRK-1 is resolved) — call it, show voice routing

4. Architecture You'd Propose for Knowledge Manager

System Design (draw on whiteboard)

Key Design Decisions to Discuss

Decision	Options	GDPR Impact
Where do embeddings live?	ai.visitberlin.de (recommended) vs Azure	On-prem = no data transfer
Which LLM for generation?	Local (qwen/llama) vs Claude API vs hybrid	Local = zero external calls for sensitive content
Embedding model?	BGE-M3 (multilingual, local) vs OpenAI embeddings	BGE-M3 runs fully local, supports DE+EN

Vector store?	pgvector (Postgres extension) vs Qdrant vs Chroma	pgvector = no extra service, familiar to IT teams
Auth?	SSO via existing AD/Entra ID	Reuses existing identity, no new credentials

5. Engagement Model & Pricing

Public Procurement Constraint: Services over €1,000 must be publicly tendered. Frank flagged this explicitly — large agencies usually win tenders. He's looking for a way to work with you directly.

Proposed Structure: Modular Sub-€1,000 Engagements

Module	Deliverable	Price	Duration
Discovery Workshop	Content source audit, knowledge graph map, gap analysis	€800	1 day
Architecture Review	Technical architecture document + infrastructure recommendations	€950	2-3 days
Proof of Concept	Working prototype on their ai.visitberlin.de server	€950	3-5 days
Team Training	Hands-on workshop for CWU AI team (RAG, prompting, Claude)	€800	1 day
Monthly Advisory	Ongoing technical guidance, architecture reviews, code reviews	€950/mo	Recurring

Larger Build (requires tender)

If the Knowledge Manager build exceeds €1,000 total (it will), you can:

1. **Help write the tender spec** — you define the technical requirements based on the discovery/PoC work. This is paid advisory, not the build itself.
2. **Bid on the tender** — with working PoC as proof, you have a credible bid even against agencies.
3. **Partner with a larger firm** — bring the technical expertise under an established bidder's umbrella.

What They Get from You (vs. an Agency)

Agency

- €150-250/hr blended rate
- Project manager + junior dev
- 3-month discovery phase
- PowerPoint deliverables
- Vendor lock-in

You

- Direct access to the builder
- Working prototype in days, not months
- Production-tested architecture
- Open-source stack, no lock-in
- GDPR-native (local-first)

6. Questions to Ask

About the Knowledge Manager

- What content sources exist today? (SharePoint, file shares, wikis, Confluence, email archives?)
- What's the current search/discovery pain? (Can't find things? Information siloed by department?)
- How many documents / what volume?
- Is `ai.visitberlin.de` the intended host? What does it run? (Ask Martin)
- Access model — all 200+ staff or department-gated?
- Multilingual needs? (DE + EN minimum?)

About the Customer Journey Chatbot

- What does the current Berlin Bot do? What platform?
- Data sources? (event calendars, hotel APIs, transport, visitberlin.com content?)
- Multi-language requirements for tourism?
- Integration points? (booking, tickets, public transport APIs)

About the Engagement

- Has Jule defined a budget envelope for the AI initiatives?
- Is there a framework agreement that allows sub-€1,000 call-offs without tender?
- Timeline — when do they want Knowledge Manager live?
- Would a paid PoC (under €1,000) be a valid first step?
- Are they open to you helping write the tender spec for the full build?

About Their Infrastructure (for Martin)

- What stack runs `ai.visitberlin.de`? (Ollama? vLLM? Azure OpenAI?)
- What GPU/compute is available on that server?
- What models are running locally?
- How is authentication handled?
- Where is data stored — on-prem Postgres? Azure?

7. Recommended Meeting Flow

Phase	Duration	What to Do
1. Listen	15 min	Let the team present their current state and pain points. Take notes. Show you're there to understand, not to pitch.
2. Show	15 min	Demo klaravex.com chat widget (live). Show the KB cited-answer response. Show architecture diagrams. <i>Concrete beats conceptual.</i>
3. Sketch	15 min	Whiteboard the Knowledge Manager architecture (Section 4 above). Map it to their ai.visitberlin.de. Show you can build on THEIR infrastructure.
4. Propose	15 min	Propose the Discovery Workshop (€800) as the first step. No commitment beyond that. Low-risk entry point under the tender threshold.

Meeting Rules

DO NOT:

- Pitch managed IT tiers (Foundation/Assurance/Directive) — this isn't an MSP sale
- Mention Klaravex LLC or US entity structure — irrelevant here
- Promise to win a public tender — focus on advisory/consulting angle
- Oversell — they hear agency pitches daily. Be the technical person who builds things.
- Discuss pricing until you understand scope — listen first
- Name-drop internal tools (Loki, Atera, etc.)

8. Key People — Quick Reference

Person	Role	Your Angle
Frank Heise	Deputy Head Digital & IT	Primary contact. Technical champion. Already sold on working with you — your job is to confirm his instinct was right.
Jule Weidner	Advisor to Executive Board	Budget authority. Needs to see clear ROI and compliance safety. Lead with GDPR-by-design + concrete outcomes.
Martin Wöbke	Network Admin, AI Server	Runs ai.visitberlin.de. Technical peer. Talk infrastructure: what models, what GPU, what stack. Build rapport here.
Kerstin Block	Biz Dev + CWU Future Hub	Strategic thinker. Interested in "model that could be of interest to other organizations." Your replicable architecture angle.
Katharina Möhr	Comms Team Lead	Key content stakeholder for Knowledge Manager. Ask her what information her team can't find today.
