

ANTHONY STEWART

Senior Cloud Infrastructure Engineer | Azure Architect | Hybrid Identity & Zero Trust
Berlin, Germany (CET) | Remote | astewart.tcml@gmail.com | linkedin.com/in/anthonystewart | itexperts-berlin.de

PROFESSIONAL SUMMARY

Senior Cloud Infrastructure Engineer and independent IT consultant with 15+ years of enterprise systems engineering experience, specializing in Azure cloud architecture, hybrid identity, and globally distributed network security. Founder of IT Experts Berlin, delivering Entra ID modernization, Zero Trust frameworks, and cloud infrastructure to international businesses across the EU. Prior enterprise record includes architecting PKI-based certificate authentication, Azure-native hybrid identity, and multi-region SD-WAN at a \$1B+ global aerospace organization spanning 10+ countries — with earlier career depth at The World Bank Group and Merrill Lynch/Bank of America. Available for remote senior engineering roles; proven delivery across US, European, and APAC time zones.

TECHNICAL SKILLS

Cloud & Azure: Microsoft Azure, Entra ID (Azure AD), Azure Files, Azure VPN Gateway, Azure Virtual Networks (VNet), Azure AD Connect, Conditional Access, Hybrid Identity, Azure CLI, Azure AI Document Intelligence

Identity & Security: PKI / Certificate Authority, Certificate-Based Authentication (EAP-TLS), RADIUS / RadSec, 802.1X, Zero Trust Architecture, MFA, SSO / SAML / OIDC, Privileged Identity Management, CIS Benchmarks, Penetration Testing, ISO 27001, DSGVO / GDPR

Networking: Cisco Meraki (MX250 / MS-425 / MR / vMX), SD-WAN, HA Firewall, VLAN Segmentation, BGP Routing, Site-to-Site VPN, Palo Alto Networks, FortiGate, Check Point, Cisco ASA/FTD, Azure Firewall, Sophos XG/XGS

Endpoint & Automation: Microsoft Intune (MDM/MAM), VMware vSphere, Active Directory, Group Policy, Windows Server, PowerShell, Power Automate, n8n, Anthropic Claude API

PROFESSIONAL EXPERIENCE

IT Experts Berlin — Founder & Principal IT Consultant

Berlin, Germany | 2026 – Present

Independent consulting practice — Azure Cloud Infrastructure, Enterprise Network Security & AI Automation for international businesses across Germany and the EU.

- Architect and deliver end-to-end Microsoft Azure solutions for international client organizations — VNet design, Entra ID identity modernization, hybrid cloud migration, M365 tenant hardening, and Azure cost optimization — serving as the primary senior cloud engineering resource for clients without in-house infrastructure capability.
- Design and implement Zero Trust identity frameworks using Entra ID Conditional Access, MFA, and Intune device trust; deploy PKI certificate-based authentication eliminating password-based access to enterprise applications and Wi-Fi infrastructure across client environments.
- Deliver AI automation projects using Power Automate, n8n, Azure AI Document Intelligence, and the Anthropic Claude API — replacing manual workflows (invoice extraction, approval chains, reporting) with reliable, documented automated processes.
- Provide platform-agnostic firewall consulting across 7 enterprise platforms (Palo Alto Networks, Check Point, Cisco ASA/FTD, Azure Firewall, FortiGate, Sophos XG/XGS, Cisco Meraki MX) with no vendor commission relationships — recommendations driven entirely by client environment fit.
- Act as fractional virtual CIO (vCIO) for growth-stage clients: technology roadmap development, Azure adoption strategy, IT budget planning, and board-level technical advisory aligned to business objectives.

FDH Aero — Senior Systems Engineer

Berlin, Germany (Remote / Global) | 2023 – 2026

\$1B+ global aerospace parts supply chain organization with operations across North America, Europe, Singapore, and China — global IT program spanning 10+ international sites and a heterogeneous multi-entity infrastructure estate.

- Architected PKI-based certificate authentication infrastructure in Microsoft Azure — designed full CA hierarchy, certificate templates, and auto-enrollment via Intune SCEP/NDES — eliminating password-based access to enterprise applications and enterprise Wi-Fi (RADIUS/RadSec 802.1X) across all managed endpoints globally; materially reduced authentication attack surface and eliminated shared-credential models.
- Engineered Entra ID hybrid identity framework integrating on-premises Active Directory for a globally distributed, multi-entity workforce across 10+ countries — implementing AD Connect with seamless SSO, Conditional Access enforcement, and MFA aligned to Zero Trust principles.
- Designed and executed global SD-WAN transformation program migrating multiple acquired business entities from heterogeneous legacy infrastructure onto a unified Cisco Meraki platform — standardizing connectivity, routing policy, and security posture across 10+ international sites without disrupting aerospace supply chain operations.
- Engineered APAC/China regional connectivity using Azure-hosted Meraki vMX with encrypted site-to-site VPN tunneling, custom BGP routing, and traffic segmentation policy — solving Great Firewall constraints while maintaining data sovereignty and reliable access to Azure-hosted enterprise resources for China-based operations.
- Deployed Azure Files as enterprise file storage for globally distributed teams, replacing legacy on-premises file servers via identity-governed Entra ID access controls — eliminating legacy VPN dependency for remote site file access.
- Built high-availability perimeter security using MX250 warm-spare firewall pairs with stateful failover, IDS/IPS policy, and VLAN micro-segmentation across global sites; designed and deployed MS-425 aggregation switching for high-density campus environments.
- Executed Active Directory-to-Entra ID migration for multiple acquired entities — rationalizing fragmented identity environments into a unified governed platform with enforced Conditional Access and MFA.
- Automated infrastructure provisioning using PowerShell and Azure CLI — scripted site buildout reduced new-site deployment effort through repeatable, auditable configuration frameworks; served as Tier 3 / Global Lead escalation engineer for networking, cloud, and identity domains across 24/7 global operations.
- Advised VP-level and executive leadership on infrastructure strategy, cloud adoption roadmap, and technology cost optimization — regularly translating complex technical tradeoffs into business-impact recommendations.

Centered Networks — IT & Network Administrator

Managed Services | 2020 – 2023

- Managed LAN/WAN infrastructure, firewall administration, switching, wireless, and endpoint environments for 15+ SMB and mid-market client accounts under SLA-compliant managed service agreements.
- Led Microsoft 365 and Azure migrations for client organizations — administered Exchange Online, SharePoint, Teams, and Azure AD; implemented VPN solutions and network segmentation for security compliance.
- Provided Tier 2/3 escalation for networking, identity, and cloud incidents; deployed Microsoft 365 security baselines including Exchange Online Protection and Conditional Access policies.

Prior IT Roles — Systems & IT Support

| 2017 – 2020

Foundation experience in enterprise desktop support, server administration, Active Directory, Cisco networking, and endpoint management across diverse organizational environments.

CERTIFICATIONS

- AZ-500: Microsoft Azure Security Technologies (2023)
- Palo Alto Networks Certified Network Security Engineer (PCNSE) (2022)
- VMware Certified Professional – Network Virtualization (VCP-NX) (2022)
- Nutanix Certified Professional (NCP) (2022)
- Cisco Certified Network Professional (CCNP) Security (2018)
- Certified Ethical Hacker (CEH) (2018)

EDUCATION

Bachelor of Science in Computer Science — Temple University, Philadelphia, PA
2009
